Grade: 12  
Subject Title: Safety 2  

**Subject Description:**  
This course covers safety standards as stipulated in Section A-III/4 of the 1978 Standards of Training, Certification, and Watchkeeping (STCW) Convention, as amended. It aims to acquaint Senior High School (SHS) students on the requirements of safety inherent to the work of Ratings Forming Part of an Engineering Watch (RFPEW). Specifically, it provides the knowledge, skills, and attitudes vital to emergency situations in machinery spaces. The competencies covered in this course are: 1) application of emergency procedures in machinery spaces, and 2) operation of emergency equipment.

| **Introduction**              | 1. Observe procedure, specification, and manuals of instruction                    | The learner shall be able to independently demonstrate an understanding of the competencies in Safety 2 as prescribed under the 1978 STCW Convention, as amended | 1. Interpret manuals  
2. Discuss the relevance of the course  
3. Explore on opportunities for Safety 2 as a career | TVL_MS212EPMS-IIIb-1             |
|                               | 2. Relevance of the course                                                        |                                                                                       |                                                                                      |                           |
|                               | 3. Career opportunities                                                           |                                                                                       |                                                                                      |                           |

**LESSON 1: APPLY EMERGENCY PROCEDURES IN MACHINERY SPACES (EPMS) (40 hrs)**

1. Emergency Situations  
a. Flooding  
b. Fire  
c. Blackout  
d. Medical emergency  

The learners demonstrate an understanding of the basic concepts and underlying principles in applying emergency procedures  
The learners shall be able to apply emergency procedures as prescribed under the 1978 STCW Convention, as amended  

LO 1. Explain the causes of various emergency situations [8hrs]  
1.1 Identify the various emergency situations  
1.2 Determine the causes of each emergency situation  

LO 2. Explain the duties and responsibilities of the emergency response team [12hrs]  
1.1 Discuss specific duties and responsibilities of each member of the emergency response team, given an emergency situation  

LO 3. Perform emergency procedures applicable to specific emergency situation [20hrs]

**LESSON 2: OPERATE EMERGENCY EQUIPMENT (OEE) (40 hrs)**

1. Different types of emergency equipment used in various types of emergency situations
   - The learners demonstrate an understanding of the basic concepts and underlying principles in operating emergency equipment
   - The learners shall be able to operate emergency equipment as prescribed under the 1978 STCW Convention, as amended
   - **LO1. Identify the different types of emergency equipment (8hrs)**
   - **TVL_MS212OEE-IVa-b-1**

2. Functions of each type of emergency equipment
   - **LO2. Discuss the functions of the different type of emergency equipment (12hrs)**
   - **TVL_MS212OEE-IVc-e-2**

3. Uses of different types of emergency equipment
   - **LO3. Demonstrate the use of the different types of emergency equipment (20hrs)**
   - **TVL_MS212OEE-IVf-j-3**
Glossary

Accident
A deviation from normal operations or activities associated with a hazard, which has the potential to result in an emergency.

Activity
Any operational process, system, structure, equipment, or group that fulfills a programmatic purpose.

Classification Guide
A document issued or approved by an authorized original classification authority or the senior agency official and containing explicit classification guidance for the use of Authorized Classifiers and Derivative Declassifiers in making classification, declassification, and appropriate downgrading determinations.

Common Hazardous Material
The material is commonly used by the general public. This includes any substance used for personal, family, or household purposes or is present in the same form and concentration as a product packaged for distribution and use by the general public (e.g., motor oil, gasoline, diesel fuel). Common hazardous material also is composed of material in such small quantities (end user quantities) that the hazard can be qualitatively determined to be a local (e.g., worker) concern only.

Condition
Any as-found state, whether or not resulting from an event, that may have adverse safety, health, quality assurance, security, operational or environmental implications. A condition is usually programmatic in nature; for example, an error in analysis or calculation; an anomaly associated with design or performance; or an item indicating a weakness in the management processes are all conditions.

Drill
Supervised, "hands-on" training for members of emergency response organizations.

Emergency
An emergency is the most serious event and consists of any unwanted operational, civil, natural-phenomenon, or security occurrence that could endanger or adversely affect people, property, or the environment.

Emergency Action Level (EAL)
Specific, predetermined, observable criteria used to detect, recognize, and determine the emergency class of Operational Emergencies; they are based on consequence estimates and evaluations performed using information from the Hazards Assessment.

Emergency Assistance Planning
The preparation for deployment of departmental resources, emergency response assets, and personnel, and/or use of facilities to support federal interagency plans, presidential direction, and state, local, or tribal agreements of mutual aid. Emergency Assistance may be implemented coincident with an Energy Emergency response and Preparedness.
## Glossary

### Emergency Assistance Program
All activities whereby departmental resources, emergency response assets, personnel, and/or facilities are deployed in support of federal interagency plans, international agreements, presidential direction, and state, local, or tribal agreements of mutual aid. The Emergency Assistance Program may be implemented coincident with implementation of the Energy Emergency Program.

### Emergency facilities
Facilities used to support an emergency response

### Emergency facilities and Equipment
Facilities, equipment, and supplies that should be established and maintained for adequate emergency response support

### Emergency equipment
Equipment and supplies that are used to support an emergency response

### Emergency Management Exercises
Evaluated demonstrations of the integrated capabilities of emergency response resources (personnel, procedures, facilities, and equipment) conducted for the purpose of validating elements of an emergency management program. Exercises should be realistic simulations of emergencies to include command, control, and communication functions and event-scene activities and may vary significantly in size and complexity to achieve their respective purposes.

### Emergency planning
The identification of hazards and threats, hazard mitigation, development and preparation of emergency plans and procedures, and identification of personnel and resources needed for an effective response

### Emergency response
The application of resources to mitigate consequences to workers, the public, the environment, and the national security, and the initiation of recovery from an emergency

### Explosion
The rapid release of a large amount of energy within a limited space [FEMA Radiological Emergency Management Glossary]

### Explosive
A chemical that is capable of burning or bursting suddenly or violently [Union Pacific Railroad Environmental Terms Glossary]

### Explosive Limits
Some items have a minimum and maximum concentration in air which can be detonated by spark, shock, fire. The lowest concentration is known as the lower explosive limit (LEL). The highest concentration is known as the upper explosive limit (UEL). [Union Pacific Railroad Environmental Terms Glossary]

### Exposure
A measurement of the total amount of radiation to which an individual is exposed related to the ionization produced in air by x-ray or gamma radiation. Similar to "dose." [FEMA Radiological Emergency Management Glossary]
Glossary

Flammable
Capable of being easily ignited and/or burning with extreme rapidity, and has a flashpoint under 100 degrees F. [Union Pacific Railroad Environmental Terms Glossary]

Flammable gas
Materials considered by the DOT as flammable: gases having a Lower Explosive Limit of less than 13% or gases having flammable range wider than 12 percentage points. [Union Pacific Railroad Environmental Terms Glossary]

Flammable (Explosive) Limits
The concentration of a gas that will burn in air. The Lower Explosive Limit (LEL) is the lowest percentage of a gas that will burn in air. The Upper Explosive Limit (UEL) is the highest percentage of a gas that will burn in air. [Union Pacific Railroad Environmental Terms Glossary] Emergency Management Terms: Glossary TRADE/EMI SIG MAY 1999 Page 22

Flash point
The minimum temperature at which a liquid gives off enough vapors to form an ignitable mixture with the air near the surface of the liquid [Union Pacific Railroad Environmental Terms Glossary]

Hazard
A source of danger (i.e., material, energy source, or operation) with the potential to cause illness, injury, or death to personnel or damage to a facility or to the environment (without regard for the likelihood or credibility of accident scenarios or consequence mitigation) (10 CFR 830.3) [DOE-EM-STD-5502-94]

Hazard categorization
Evaluation of the consequences of unmitigated releases to categorize facilities or operations into the following categories:

[DOE G 151.1-1]
- Hazard Category 1 - The hazard analysis shows the potential for significant offsite consequences.
- Hazard Category 2 - The hazard analysis shows the potential for significant onsite consequences.
- Hazard Category 3 - The hazard analysis shows the potential for only significant localized consequences.

Hazard classes
Non-nuclear facilities will be categorized as high, moderate, or low hazards based on the following [DOE 5481.1B]

[DOEEM-STD-5502-94]
1. High - hazards with a potential for onsite and offsite impacts to large numbers of persons or for major impacts to the environment;
2. Moderate - hazards which present considerable potential onsite impacts to people or the environment, but at most only minor offsite impacts; and
3. Low - hazards which present minor onsite and negligible offsite impacts on people and the environment.
Glossary

Hazardous air pollutant
A pollutant to which no ambient quality standard is applicable and that may cause or contribute to an increase in mortality or in serious illness. [Union Pacific Railroad Environmental Terms Glossary]

Hazardous chemicals
The U.S. Occupational Safety and Health Administration (OSHA) uses the term hazardous chemical to denote any chemical that would be a risk to employees if exposed in the work place. Hazardous chemicals cover a broader group of chemicals than the other chemical lists. [Union Pacific Railroad Environmental Terms Glossary]

Hazardous classes
A series of nine descriptive terms that have been established by the U.N. Committee of Experts to categorize the hazardous nature of chemical, physical, and biological materials. These categories are flammable liquids, explosives, gases, oxidizers, radioactive materials, corrosives, flammable solids, poisonous and infectious substances, and dangerous substances [Union Pacific Railroad Environmental Terms Glossary]

Hazardous materials
Any solid, liquid, or gaseous material that is toxic, flammable, radioactive, corrosive, chemically reactive, or unstable upon prolonged storage in quantities that could pose a threat to life, property, or the environment [DOE G 151.1-1]

Hazardous Material Incident
A situation in which a hazardous material is or may be released into the environment [Union Pacific Railroad Environmental Terms Glossary]

Hazards assessment
The identification and characterization of hazardous materials specific to a facility/site, analyses of potential accidents or events, and evaluation of potential consequences. The Hazards Assessment also includes a determination of the size of the geographic area surrounding the site, known as the Emergency Planning Zone (EPZ), within which special planning and preparedness activities are required to reduce the potential health and safety impacts from an event involving hazardous materials. The Hazards Assessment provides the technical basis for the Hazardous Materials Program. [DOE G 151.1-1, Vol. 2]

Incident
Any deviation from normal operations or activities which has the potential to result in an emergency. [DOE G 151.1-1]

Ingestion
The term used when radioactive materials are taken into the body through the mouth, such as by eating or drinking. Also applies when breathing results in the inhaled materials being swallowed. [FEMA Radiological Emergency Management Glossary]

Inhalation
The term used when radioactive materials are taken into the lungs by breathing [FEMA Radiological Emergency Management Glossary]
